

Professional Summary:

Java Backend Developer with nearly 3 years of professional experience in building and maintaining scalable enterprise applications. Proficient in developing robust RESTful APIs and Microservices using Java and the Spring Boot ecosystem. Dedicated to high code quality by following industry standard best practices

Technical Skills:

- Languages: Java (Core Java, Java 8+), SQL
- Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Spring Cloud
- Architecture: REST APIs, Microservices, Event-Driven Systems
- Databases: MySQL, PostgreSQL, Query Optimization, Indexing
- Messaging & Caching: Apache Kafka, Redis
- DevOps: Docker, Docker Compose, AWS (EC2, S3)
- Testing & Tools: JUnit, Mockito, Maven, Git, IntelliJ IDEA, Postman

Experience:

Wipro Ltd. | Project Engineer (Developer L1) | May 2022 – Jan 2025

- Debt Visibility Dashboard:** Developed a centralized retail banking dashboard aggregating loan data from legacy systems, improving financial transparency for end-users.
- Performance Optimization:** Engineered a centralized exception handling framework, standardizing API responses and achieving a 20% improvement in frontend integration speed.
- Data Strategy:** Designed optimized DTO contracts to streamline data retrieval, reducing payload sizes and enhancing application responsiveness.
- Quality Assurance:** Maintained 80%+ unit test coverage using JUnit and Mockito, ensuring system reliability during high-traffic billing cycles.
- Agile Delivery:** Collaborated in a high-velocity environment, delivering production-ready features in 2-week sprints using Jira for documentation.

Personal Projects:

Office Resource Booking System (ORBS) | Java 17, Spring Boot 3, Spring Cloud, PostgreSQL, Kafka, Docker | [GitHub](#)

- Built a microservices-based office booking platform using API Gateway, Eureka, Config Server, and database-per-service architecture.
- Implemented JWT authentication and role-based authorization for secure access across multiple Spring Boot services.
- Developed booking workflows with overlap detection, resource validation, and ownership-based cancellation to enforce real business rules.
- Integrated OpenFeign and Kafka for synchronous service communication and asynchronous notification processing.
- Containerized the system with Docker Compose and enabled Swagger/OpenAPI and Actuator for demo-ready deployment and observability.

EMI Planner (Loan Atlas) | Java 17, Spring Boot 3, Spring Security, MySQL, Redis, Docker | [GitHub](#)

- Built a full-stack EMI planning platform to manage loans and forecast monthly repayment obligations through a 12-month calendar view.
- Implemented JWT-based authentication, user-scoped access control, and robust validation for secure, reliable loan management.
- Improved performance and scalability with Redis caching, optimized database design, and Dockerized deployment.

FinStream | Java 17, Spring Boot 3, Java Streams, REST APIs, Docker, Render | [GitHub](#)

- Built a financial analytics web app that processes CSV transaction data and delivers real-time insights on income, expenses, spending categories, and monthly trends.
- Developed a stateless in-memory analytics engine using Java Streams and BigDecimal for fast, precision-safe financial calculations with robust validation and error handling
- Dockerized and deployed the application on Render using a multi-stage build for lightweight, production-ready hosting.

Education:

- Scaler Academy | Sept 2024 – present – Software Development – Backend Specialization
- Hindustan University | 2018 – 2022 - B.Tech
