

PROFESSIONAL SUMMARY

Java Backend Developer with experience building REST APIs and backend applications using Java, Spring Boot, SQL, and REST-based backend systems. Hands-on with PostgreSQL, Kafka, Redis, Docker, and backend application development through project work and continuous learning. Familiar with API debugging, exception handling, unit testing, and Agile-based development workflows. Currently deepening backend engineering fundamentals through Scaler Academy's Backend Specialization and seeking opportunities to grow as a backend engineer.

TECHNICAL SKILLS

Languages: Java (Core Java, Java 8+), SQL
Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Spring Cloud
Architecture: REST APIs, Microservices, Event-Driven Systems
Databases: MySQL, PostgreSQL, SQL Querying, Query Optimization, Indexing
Messaging & Caching: Apache Kafka, Redis
Tools & DevOps: Docker, Docker Compose, Maven, Git, Postman, IntelliJ IDEA
Testing: JUnit, Mockito
Cloud: AWS (EC2, S3)
Concepts: Exception Handling, API Debugging, Unit Testing, Agile Development

EXPERIENCE

Wipro Ltd. | Project Engineer (Developer L1) | May 2022 – Jan 2025

Debt Visibility Dashboard | US Bank

- Developed REST APIs using Spring Boot and Spring Data JPA for aggregating financial data from multiple internal systems.
- Worked on centralized exception handling and standardized API responses to improve backend reliability and frontend integration.
- Created optimized DTO contracts for secure and efficient data transfer between backend and frontend systems.
- Assisted in debugging API and data-related issues during development and testing phases.
- Wrote unit tests using JUnit and Mockito to validate business logic and improve application stability.
- Collaborated within Agile teams during sprint planning, development, and review activities.

PERSONAL PROJECTS

Office Resource Booking System (ORBS) | Java 17, Spring Boot 3, Spring Cloud, PostgreSQL, Kafka, Docker | [GitHub](#)

- Developed Spring Boot microservices for office resource booking with JWT-based authentication and role-based authorization.
- Implemented booking conflict validation, inter-service communication using OpenFeign, and Kafka-based asynchronous notifications.
- Used PostgreSQL with database-per-service architecture and containerized the system using Docker Compose.
- Integrated Swagger/OpenAPI and Spring Boot Actuator for API documentation and application monitoring.

EMI Planner (Loan Atlas) | Java 17, Spring Boot 3, Spring Security, MySQL, Redis, Docker | [GitHub](#)

- Built a loan management backend application using Spring Boot, Spring Security, MySQL, and Redis.
- Implemented JWT-based authentication and user-scoped access control for secure loan management operations.
- Developed Redis caching for frequently accessed endpoints and used indexing strategies to improve query performance.
- Added centralized exception handling and validation for reliable API behaviour.

FinStream | Java 17, Spring Boot 3, Java Streams, REST APIs, Docker, Render | [GitHub](#) | [Live](#)

- Built a backend analytics application that processes uploaded CSV transaction data and generates categorized financial insights.
- Implemented transaction aggregation and analytics using Java Streams and BigDecimal for precision-safe calculations.
- Developed REST APIs for file upload and analytics generation without database dependency.
- Containerized and deployed the application using Docker and Render.

EDUCATION

Scaler Academy | Sept 2024 – Present | Software Development — Backend Specialization
Hindustan University | 2018 – 2022 | B.Tech — Automobile Engineering
